STANDARDS BULLETIN 2015-04

Reaffirmation of Second Edition CAN/ULC-S703-09

STANDARD FOR CELLULOSE FIBRE INSULATION (CFI) FOR BUILDINGS

ULC Standards is pleased to announce the publication of the Reaffirmation of the Second Edition of CAN/ULC-S703, Standard for Cellulose Fibre Insulation (CFI) for Buildings. This National Standard of Canada was approved by the ULC Standards Committee on Thermal Insulation Materials and Systems, and is published under the date of April 2015.

This Standard specifies requirements for treated wood-based cellulose fibre intended for use as thermal insulation (Cellulose Fibre Insulation, CFI) in new and existing buildings within the temperature range of -60 °C to 90 °C.

This Standard describes general requirements for the material and additional requirements specific to the types of CFI.

The methods used in this Standard to measure and describe the properties of materials, products or assemblies in response to heat and flame under controlled laboratory conditions do not describe or appraise the fire hazard or fire risk of materials and products under actual fire conditions. Results of these tests are meant to be used as elements in a fire risk assessment that takes into account all of the factors that are pertinent to an assessment of the fire hazard of a particular end use.

The Second Edition, published in 2009, has been reaffirmed in 2015. The only addition to the text provides safety and warning markings in both English and French.

CAN/ULC-S703 is currently referenced in the National Building Code of Canada and many other Codes and Regulations.

This Reaffirmed Second Edition Standard can be ordered for \$228.00 (hard copy) or \$190.00 (PDF) through our website at www.ulc.ca by selecting *ULC Standards*. Once at the *ULC Standards* page, select *Sales of ULC Standards Materials*.

Should you require additional information, please contact John Wade at (613) 368-4426 or by email at address: John.Wade@ul.com

Yours truly,
ULC Standards
